June 15, 2009

Dear Oxygenated Fluids Distributor:

Please be advised that effective **July 1, 2009**, ExxonMobil Chemical Company (EMCC) will increase its prices for the following oxygenated fluids by ten (10.0) ¢/lb:

IPA (all grades)	MEK (all grades)
IPE (all grades)	SBA (all grades)

All other terms and conditions will remain the same.

Reported values for crude oil and fuel products have continued to escalate at a rapid pace. Crude oil prices in 2Q09 have increased at a rate 40% faster than the same period last year. These high energy prices are having a direct impact on the costs of propylene, butylene, and other key petrochemical feedstocks. Additionally, the pace of these increases have made expectations around future costs even more uncertain.

Despite EMCC's previous price increases, prices have not sufficiently kept up with the recent changes in feedstock costs. Consequently, product margins remain under significant pressure. As a result, additional price increases are needed to return margins to minimal acceptable levels.

We recognize that product price increases can create challenges in your downstream businesses, so we will continue to provide ongoing communications to help you manage through these difficult times.

Your understanding and support is much appreciated.

If you have any questions, please contact your ExxonMobil Chemical Sales Representative.

Sincerely,

A handwritten signature in black ink that reads "Paul J. Galasso". The signature is written in a cursive, flowing style.
